NOTE		1. All parameters NOT specially mentioned are measured at 230VAC input, rated load and 25℃ of ambient temperature. 2. Ripple & noise are measured at 20MHz of bandwidth by using a 12" twisted pair-wire terminated with a 0.1uf parallel capacitor. 3. Please see "DIP switch table". 4. Derating may be needed under low input voltage. Please check the static characteristics for more details. 5. Length of set up time is measured at first cold start. Turning ON/OFF the power supply may lead to increase of the set up time. 6. Efficiency is measured at 500mA/80V output set by DIP switch. 7. No load power consumption<1.2W is measured at 180~277VAC, with lighting fixture connected and output current dimmed to 0%. 8. The power supply is considered as a component that will be operated in combination with final equipment. Since EMC performance will be affected by the complete installation, the final equipment manufacturers must re-qualify EMC Directive on the complete installation again.

■ **DIMMING OPERATION**

※ **PUSH dim(primary side)**

Ignore	To avoid reaction on AC spike	<0.05 sec.
Short push	Push to turn ON-OFF	0.1~1 sec.
Long push	Dimming up or down	1.5~10 sec.
Reset push	Setting light to 100%	>11 sec.

· Maximum number of drivers up to 10 pcs.
· Maximum length of the cable, from push button to last driver is 20 meter.
· Factory setting at 100%.
· When the light is lower than 10% it will always dim up, or when the light output is higher than 90% it will always dim down.

Warning: The pushbutton can only be connected in between the PUSH terminal of LCM-40DA and AC/L (brown or black color). It would cause short circuit if it is connected to AC/N.
※ **DALI interface(primary side)**
· DALI protocol including 16 groups and 64 addresses.
· First step is fixed at 6% of output.

■ **SYNCHRONIZATION OPERATION**

· 10 drivers(max.) synchronization (1 master + 9 slaves)
· Maximum cable length between each units : 20 meter.

■ **TEMPERATURE COMPENSATION OPERATION**

NTC derating curve
LCM-40DA have the built-in temperature compensation function (T ↑ ,Io ↓). By connecting a temperature sensor (NTC resistor) between the NTC +/- terminal of LCM-40DA and the detecting point on the lighting system or the surrounding environment, output current of LCM-40DA could be correspondingly changed to ensure the long life of LED.

1.LCM-40DA can still be operated well when the NTC resistor is not connected and the value of output current will be the current level that you set through the DIP switch.

2.

NTC resistance	Output Current
220K	< 60℃ , 100% of the rated current (corresponds to the setting current level) > 60℃ , output current begin to reduce, details please refer to the curve.
330K	< 70℃ , 100% of the rated current (corresponds to the setting current level) > 70℃ , output current begin to reduce, details please refer to the curve.
470K	< 80℃ , 100% of the rated current (corresponds to the setting current level) > 80℃ , output current begin to reduce, details please refer to the curve.

Notes: 1. MW does not offer the NTC resistor and all the data above are measured by using THINKING TTC03 series.
　　　2. If other brands of NTC resistor is applied,please check the temperature curve first.
　　　3. Synchronization function of the power supply will be invalid when the "temperature compensation" function is in use.
